Day-7

APTITUDE

Question - 1

1) What is the probability of getting a head when tossing a coin?

Formula: $\frac{\text{No of favourable outcome}}{\text{Total no of possible outcome}}$

outcome = 2 (Head, Tail)

→ (H, T)

$\boxed{\rightarrow 1/2}$ Answer.

2) What is the probability of getting a number greater than 4 when rolling a dice?

Sol:-

No of greater than 4 ⇒ 5, 6 → 2 outcomes

Total outcomes = 6

$= \cancel{2}/\cancel{6}_3$

$\boxed{\Rightarrow 1/3}$ Answer

3) A bag contains 3 red balls and 2 blue balls. Find probability of picking a red ball.

Sol:-

Red Ball = 3.

Blue Ball = 2

Total Balls = 5

Red Balls = 3

$\boxed{\rightarrow 3/5}$ ⇒ Answer.

4) If two coins are tossed, what is probability of getting two heads?

Possible outcomes = {HH, HT, TH, TT}

Favourable outcomes = {HH} → 1

$\boxed{\text{Answer} = 1/4}$

5) Probability of selecting a vowel from the word ENGINEER.

Sol:-

WORD ⇒ ENGINEER

Total letters = 8

vowels ⇒ E, I, E, E → 4 vowels

$= \cancel{4}/8 = 2$

$\boxed{\text{Answer} \Rightarrow 1/2}$

Block 2 - Reading Passage Answers.

1) what is the main role of an operating system?

The main role of an operating system is to manage hardware resources and provide services for computer programs.

2) why is memory management important?

Memory management is important because it helps use memory efficiently and improves system performance.

3) what is process scheduling?

Process scheduling is method of

particular time in the CPU.

Grammar Correction

1) He don't know operating system
He doesn't know operating system.

2) She were learning data structures.
She was learning data structures.

3) They has solved the problem
They have solved the problem.

Block - 3

I am going to talk about how Internet works.

Internet is a global network that connects computers all over the world. It allows peple to share information, communicate and access websites. When we type a URL, our browser sends a request. DNS converts the website name into an IP address. Then the request goes to a server where the website is stored. Finally, the server sends a response and the browser display the webpage.
